mobile app

# project overview

# PROJECT OVERVIEW

My original plan was to redesign a website for make it work better on a mobile device. I was

# objective

# OBJECTIVE

For my interview, I wanted to find out what can be used as an aid to help people with their travels. As I thought about what kind of questions I wanted to ask, I had an idea of what question I wanted to ask first. What is your experience with traveling websites? Do you normally browse from your desktop or your mobile phone? What kind of features would you like to see that would have you used your phone more for traveling? From there, I would form my questions depending on how they answer. I think this technique came in handy for one of my interview. I believe everyone pretty much uses their desktop or laptop to do most of their searching ad planning. So the question is, what would a mobile app or website be good for?

Interview 01  
Randy O.

Recently took a trip to South Korea for the first time.  
Married for about a year, so Randy and his wife decided to go to South Korea for their honeymoon.  
He had a smart phone but didn't really use it on his trip. Here are some of the things he said that would have made his trip easier.

Travel planners, what serves you are looking for, Hotels  
a step by step process planning process, find good rates depending on budget. filter search on budget,  
what do you want to see to have you book with a hotel? annemities, what are they close too, activities

videos and photos can help, good visual reference of room and hotel, and outside of hotel, to help find a lot of places.

Have social aspects, review on app when planning trip,  
ask when what he thought about having people upload photos or videos to app?  
could be neat but could read the reviews quicker then watching a video.

travels sites have tons of info, find way to make shifting through info easier,

hotel  
a sense of where the room is in the hotel. and outside view from room,  
booking.com was easy to navigate through,

fewer steps to find info, some sights makes you jump through hoops to find info  
have a good search setup, some sites starts over by accident or takes a long time to search

would like to see some sort of 3d view of the hotel floor plans

bad about mobile  
hotel search sometimes gets lost from accidentally browsing somewhere else

language  
booking.com had printout in korean and english, bilingual for the locals and travelers just in case the can't understand the language

most useful thing about app  
book hotel, plan and schedule before going and using it as you travel  
itinerary,  
see what else is going on if plans change  
order room service, or menu of restaurant or hotel

Interview 02  
Melinda B  
planning a trip to hawaii this summer for family  
like to do search from ipad or desktop

what would you like to see on a mobile version?  
see reviews, details of room and pictures of room,  
easy to see but not squeezed together  
able to get full information  
see image with link to more detail  
easy to go back to previous pages  
room rates and availability  
have different views of room and hotel  
see map of location and activities around hotel

what are your paint points to travel sites, be it mobile or desktop?  
she used a website that made her enter in travel time before she could get more info. It bugs her.  
If get information about a package deal from hotel about a tour, would like to get easy access to the actual tour website to get more detail information

make it easy for someone just to be curious and explore without acting like you are committing.

videos are ok but would like to have options to read about information.  
if video is only to get info then that bugs her.

want to see where the rooms are before committing to it. have view of outside from the room you select to make selections

what features would you like to see on a mobile app to help you on your travels?  
be able to make dinner reservation  
mobile app concierge: reserve a tour or hotel has diff restaurant they recommend  
have info about activities

keep my informations to frequent hotels, which room you like or didn't like, for future stays

at same hotels

Interview 03  
Marie C

iphone to small, to hard to navigate

what would you like to see on a mobile version?  
user friendly presents, simple information and user friendly navigation  
limit on info on each screen  
easy navigation tool  
master information bar  
price of hotel easy to get to  
compare price and features

referencing to yelp  
top part checking boxes  
have filters for kid friendly, high tourist, etc

what are your paint points to travel sites, be it mobile or desktop?  
have to press back button a billion times to get to a main page  
bothers her if she can't easily get back to the home page  
she would just start over

having some kind of visuals of hotels and surrounding areas,  
panorama views

videos may be to much: don't want t put on earphones, bad connection so have to wait for video to buffer  
have the copy close to the video, so if they don't want to see to video the copy is close by

have price easy to access, price is very important to her

what features would you like to see on a mobile app to help you on your travels?  
reluctant to put app on phone if use only once.  
not app crazy  
would like a general travel app  
save where you go and have itinerary features  
push notifications for deals  
mobile app concierge:  
have app be connected to everything around you,  
have categories, for instance, kid related activities for family  
have a wake up call  
doing room services  
schedule room cleaning when you are away  
travel app that save your trip even afterwards

business traveler who go to the same places to have info saved so don't have to reenter them,  
for instance same hotel  
keep my preferences,

annoyed with advertisement popups that can't be closed easily or to close to other important links

Interview 04  
Kim C  
Went to New York a couple of times, and was in Hawaii. Don't have smart phone. Husband does most of the travel planning.

Concern about hotel, determine budgets,  
Have a bucket list of where she wants to go, look at review of those places before going.  
subscribes to travel magazine, pictures are a big deal to her. Reviews from friends before booking hotel and airline.

Husband mainly use desktop to do travel planning.

What features would you like to see on mobile app for traveling?  
Like to see pictures,  
Keep track of where you wanna go  
Uses pinterest to follow people as they travel and go to certain places  
would like to have features like pinterest where they show activities around places you wanna go  
think it will more attract people go

pain points on using mobile phone  
mobile screens makes it hard to read copy, afraid of losing it while you travel

thinks ipad is more ideal because of a larger screen, easier than carrying a laptop  
use it to log travel with pictures

feature on ipad to help your travels?

place to stay, info to places to eat on a budget  
referring back to yelp  
be nice to save places you want to see on the app, wouldn't normally bother on a smartphone because screen is so small, but will be willing to do it on an ipad  
save places you want to go with reviews,

thinking of social aspects,  
suggest have a bucket list that other people create for you when are planning to go somewhere for a certain period of time. Like a one day trip to three days to a week.  
People can suggest must see places close to you in that time span.  
You have to think to much about what to sec. Already have an itinerary.  
Also include prices so you can see how much to budget for.

bucket list feature important to her

place to stay, place to eat, place to visit  
time frame, agenda,

have category:  
traveling or vacation,  
single, couple, family

needs to be clear and simple, not to much information

have information about travel safety, a travel safety checklist, reminders  
she mention getting travel insurance, most people don't know about it or think about, say's it pretty affordable

she talks about price sharing with someone, like going on a gondola that is a flat price going one way, can split price with a few other people, social meetup to save money on travel

Interview 05  
Tu T  
Used to work in the hotel. Have a view from being on the other side helping tourist navigate their trip.

Prefer using desktop to do research for travel. Says sometime when you try booking on the phone, it doesn't go through. Doesn't seem as reliable.

Like previous interviewees, prefer larger screen to see more information.

If mobile app makes it easier and more reliable, then use it more. Rarely use desktop or laptop to most of browsing.

what features do you think would be help tourist out on a mobile app?  
touring information, have a question and answer section.

what kind of questions?  
ask for tours, extra beds, renting, taxi, airport

be convenient for traveler and hotel worker,  
travel and ask questions before they go, and hotel can answer them when they have time. are have answer already available.  
have a database of most frequent question for searching

Ask if a tablet version be useful or to cumbersome.  
Respond was, if you only have one hotel, then what is the point in building an app.

Have a site that have specific service for that specific hotel, one way to promote the hotel.

What would like to see, either mobile or web that you like to see?  
Home, room type and price, q and a (with search keyword), contact, amenity, booking  
touring info, help desk info.

Link a number on the site or app that is free and can connect to the hotel. Using existing service like skype, yahoo messenger, google plus, vibor, etc. that would go directly to cell phone of hotel.

use number for free instead of paying international call.

same idea as other interviewees about app, if only use one for one hotel, then people might not download it.  
A mobile web might be better.

# COMPETITIVE ANALYSIS

# persona

# problem statement

“We are newlyweds who are petty tech savvy. We have multiple devices but usually use our iphones for most of our internet interactions.”

“We like to travel but haven't been able to find an app that would let us keep our travel plans in order while keeping track of our budget.  
This makes us feels really frustrated.”

“We tried apps like RoadTripper and ..., but they don't have the features we need when we are planning our trip.”

# MEET ANNA AND MIKE

**profile:** Traveling Newlywed

**age:** 26 & 30

**marital status:** Newly Wed

**occupation:** Nurse & Teacher

**combine salary:** \$125k

**home:** Albuquerque,  
New Mexico

**personality:** Like to experience new places.  
Adventurous. Spunky.

“hard time keeping track of all the  
information from different resources”

## scenerio:

Anna and Mike are recently married and planning to have children some day. But for the time being, they would like to travel and see the world. They have a list of places that they would like to go see but they want to prioritize by budget and main attractions.

They subscribe to a lot of travel magazines and keep a record of places they are interested in seeing. Some of the things they look at are hotel accommodations, and the type of activities and attractions that are around the hotel.

Anna and Mike would do their search on sites like yelp to get recommendations on places to see and eat, and would use apps like google maps to get an idea the distance between locations. They factor in a budget for the places they want to see and stay because their trips usually goes on for 2 weeks.

## needs:

- find a way to combine research into one place
- being able to read reviews and seeing pictures,
- create a to do list with rough estimate of cost
- find easy way to save places, location, and check them off when they are done.

## pain points:

- too much information spread out across different sites
- need to find a way keep information in one place
- need to know how much trip will cost
- lots of sites have too many details to sift through to get information

# user goals

## A. User needs to create enter new activity into app

1. go to new trip
2. go to calendar
3. select begin date|
4. select add activity
5. enter in new activity

## B. Goal: User needs to enter in cost of activities

1. select trip
2. select day
3. select activity
4. enter in cost of activity

## C. Goal: User needs to map out days activity

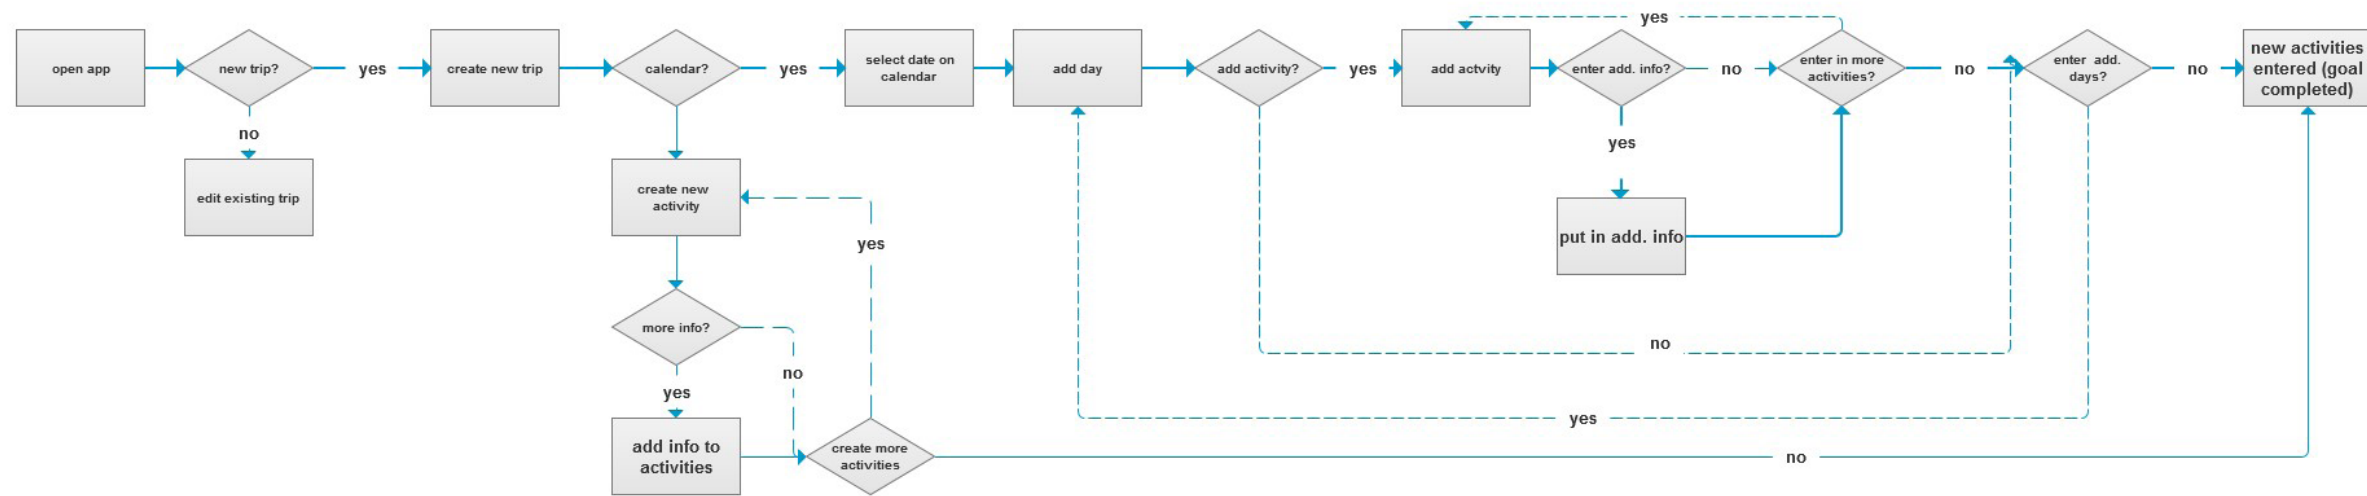

1. select trip
2. select day
3. select activity
4. select more info
5. enter in address of activity
6. repeat for rest of activity for the day
7. go back to days activity
8. select map of days activity
9. plan route and reorder activities

## D. Goal: User query to find places to go on trip

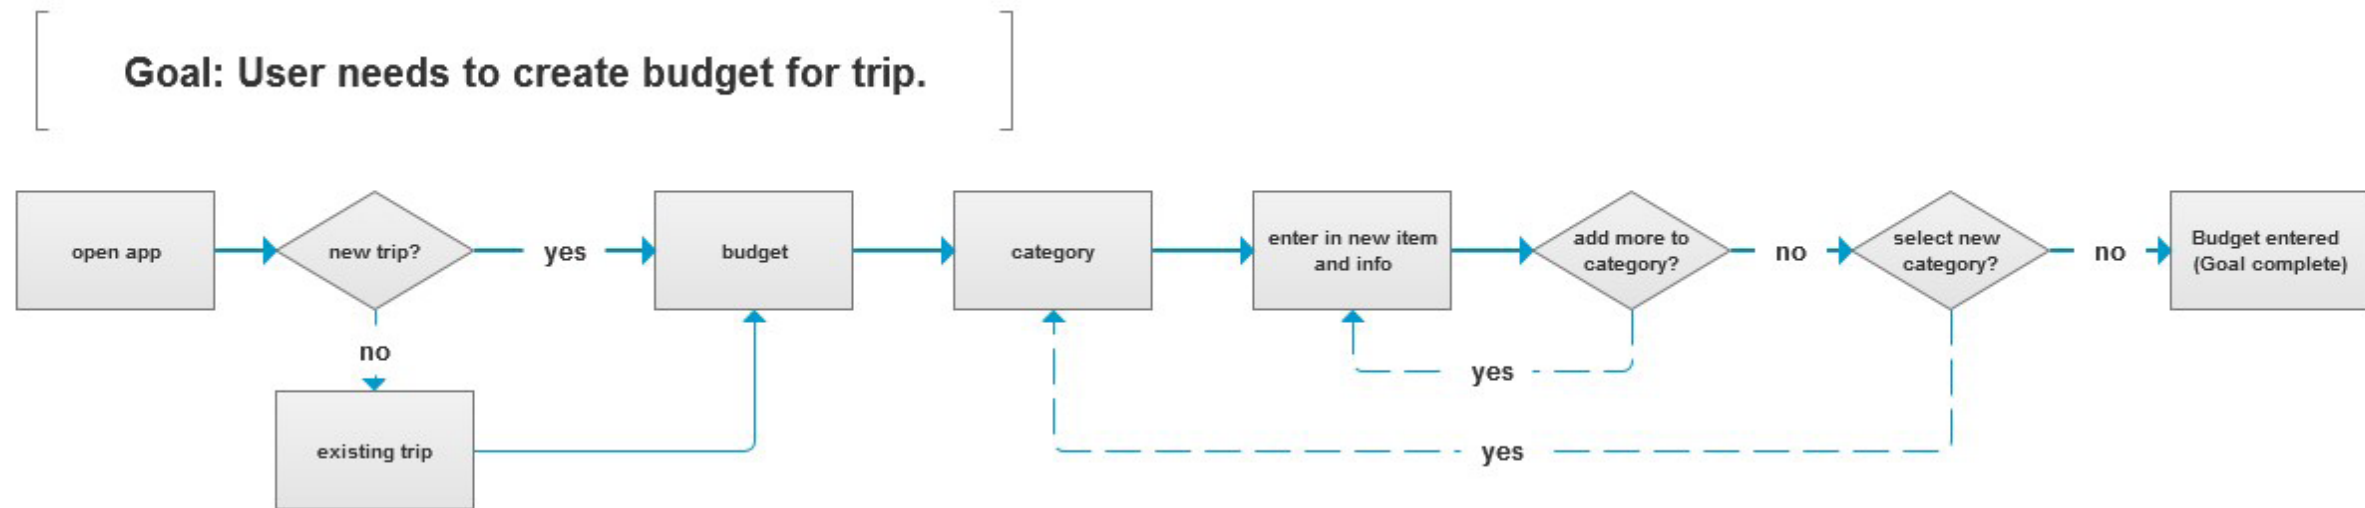

1. connect to facebook
2. connect to twitter
3. connect to other social apps
4. type in question in query section

# user flow

# GOAL: USER NEEDS TO ENTER IN ACTIVITIES

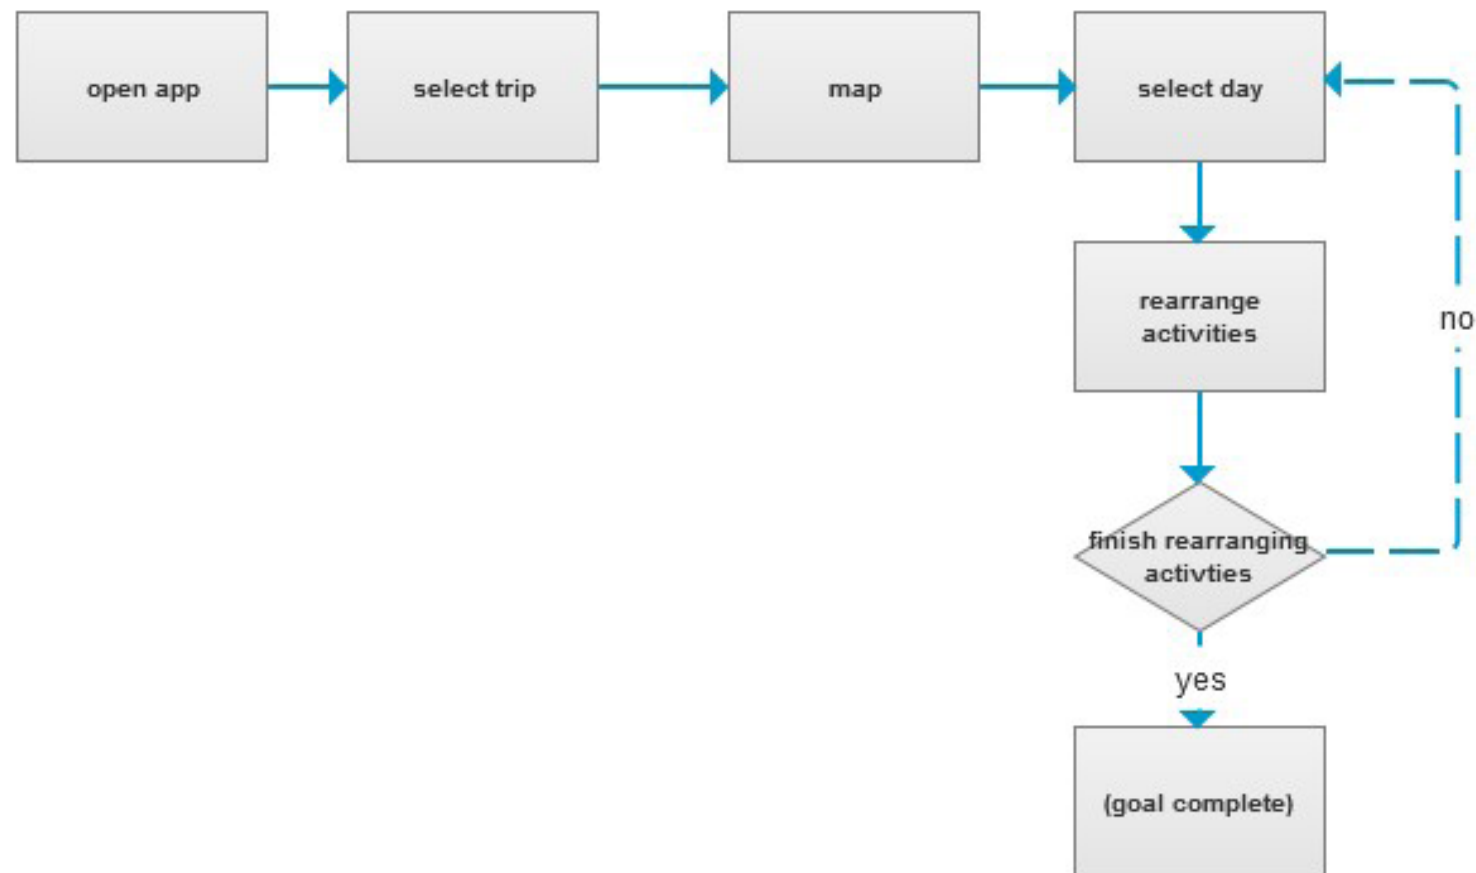

# GOAL: USER NEEDS TO CREATE BUDGET FOR TRIP.

# GOAL: USER NEEDS TO MAP OUT DAYS ACTIVITIES

**Goal: User needs to map out days activities**

# business objective

# BUSINESS OBJECTIVE

1. Why: Business objectives. what are you trying to accomplish? How does that match up with what your users are trying to accomplish? How will content play into that relationship?

The business objective for Trip'n on a Budget is to get branding awareness out by having user post their activities from our app and website to different social media outlets. With the posting, we would like to get partnership with different companies for services, discounts and financial incentives. This matches up with what the user wants to accomplish by providing them with additional information on where to go and what to do, and providing discounts for savings. Content plays a big role by providing information to potential partnership from companies to user activities.

2. What: What is the message and tone of your content?

Our message is "Keeping one eye in the sky and the other on your pocket". There are two parts to

our app, one is for travel planning and the other is for budgeting. One is more fun to think about and the other, not so much so. But people like saving money and finding good deals, so that can be fun too. The tone that will be used will be more playful, lighthearted, adventurous.

3. Who: Who is the audience?  
What is important for them?

The audience are the one who likes to plan out their travel itinerary. They like to plan for their trips. They also like to budget and watch where their money is going. They would like to have fun on their trips while finding ways to save money and find deals.

4. Where: Where will content appear?  
Location? Device? context?

The main content interaction will be from their mobile phone. Because of the portability, they can search, update, post and many other things while on the go. They can access information from a laptop or a tablet, but most of the time it

will be from a mobile phone.

5. How: How will content be presented?  
Images? Text? Video?

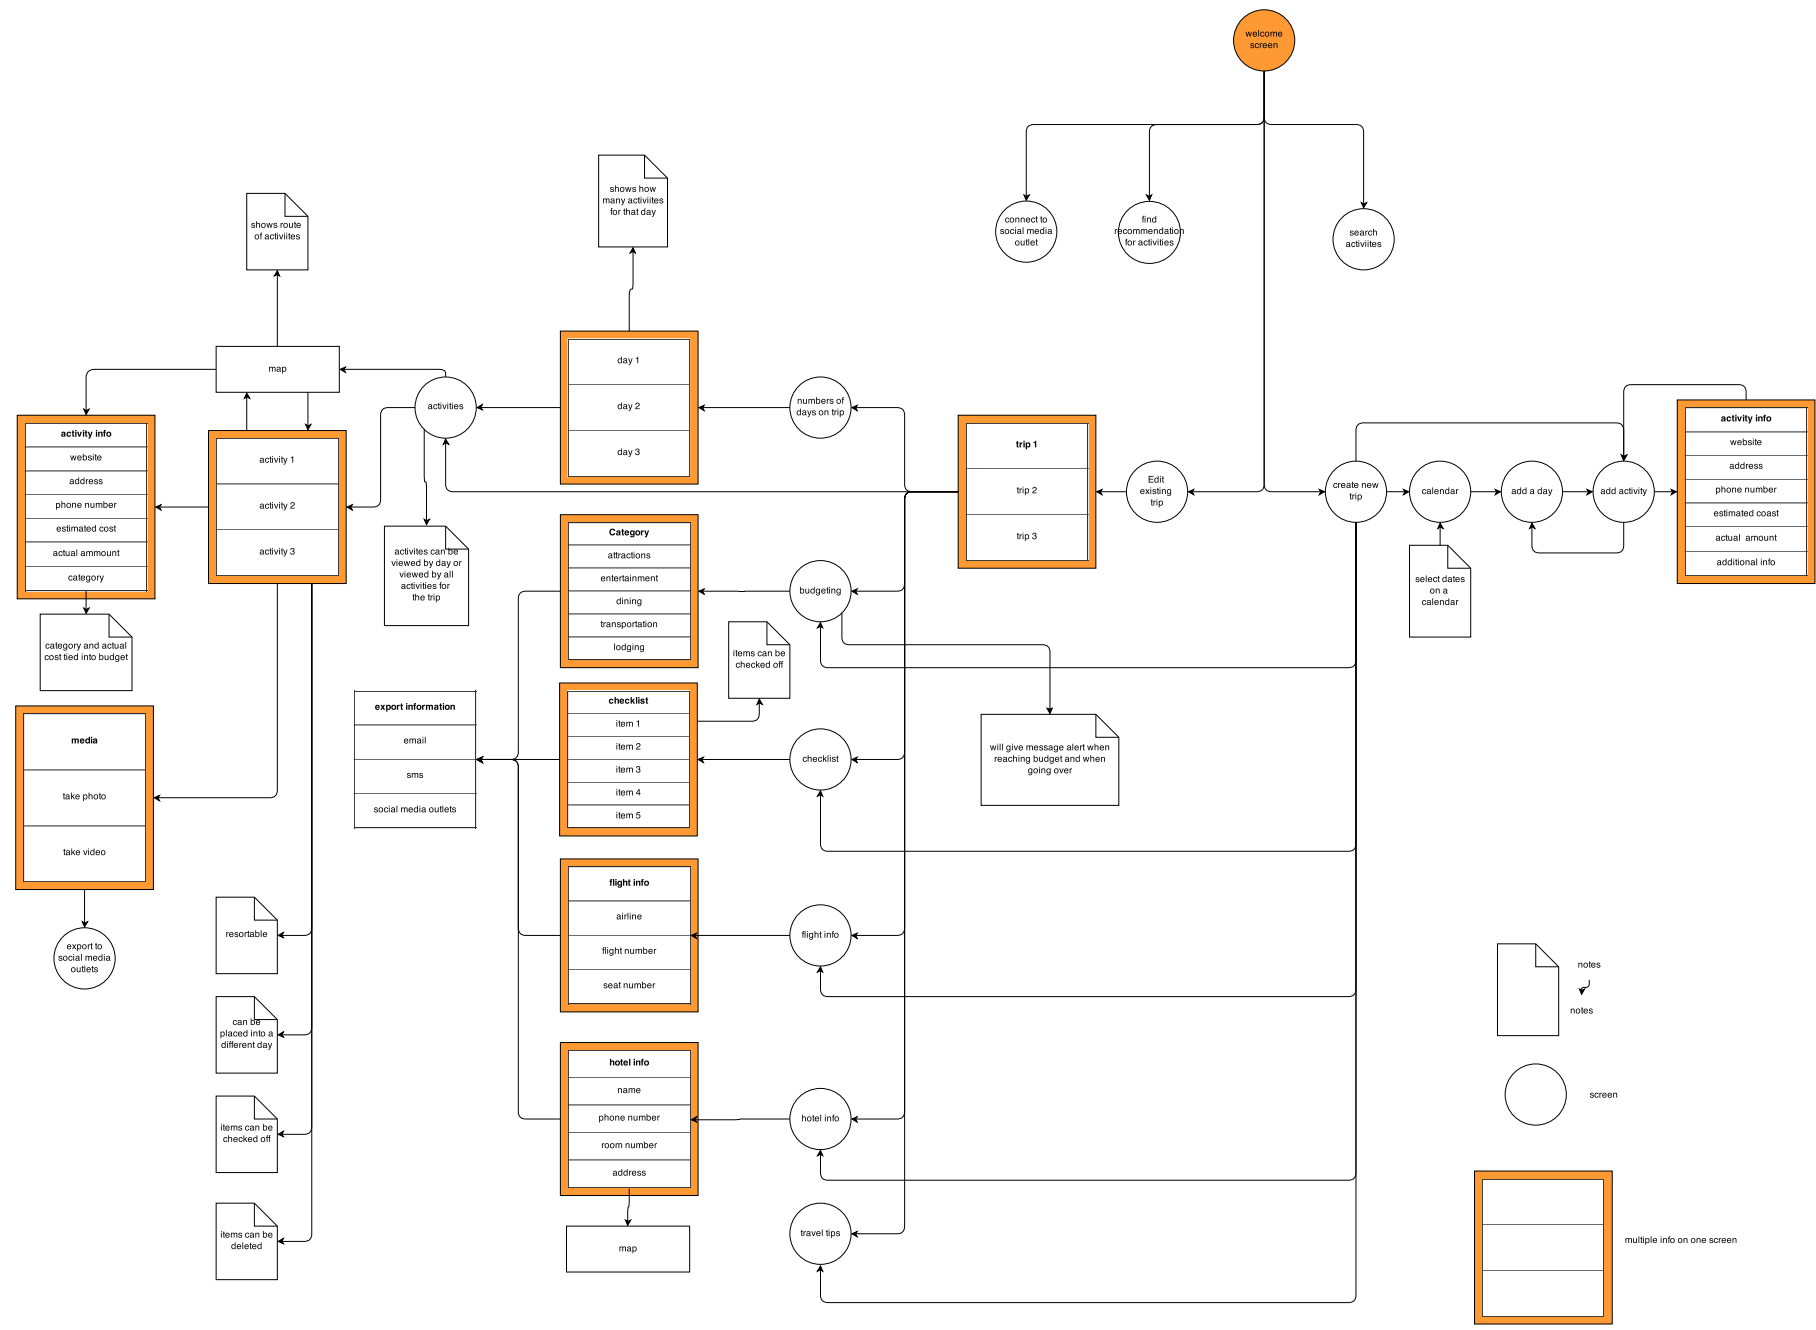

User have the options to create photos and videos to post online. They are piecharts that helps the user visualize their budget. Maps to help the user navigate and text for additional information of their activities.

6. When: When will content be published?  
(Upon development? Continuously? Every once in a while?)

Contents will be provided by the user. The user will put in the content when they are planning and budgeting for their trip. While on their trip, they will keep a journal using text, photos and videos and sharing it through different social media outlets.
